Portfolio with hover

BEFORE HOVER

AFTER HOVER

Simple Navbar

- Create a simple responsive web-page with some random content.
- Use Flex-Box to create a responsive navbar, which is also sticky in large screens.
- Don't let your navbar remain sticky in phone size.
- Use one logo and 5 links as items of your navbar (logo is aligned to left and items can be placed in center).

Nav & Side Bar

- Create a simple responsive web-page with some random content.
- Create a fixed sidebar to be displayed in laptops and large screens.
- Create a sticky navbar with same items as your sidebar in order to be displayed in phone and tablet size.

Some Notes

- Use 'Media Screen Queries' to make your elements responsive.
- Use Transition in each Element.
- Define **Transform** actions for hover state of each element.
- Try to make your elements just like samples.
- Feel free to add more styles to each element, you can use more borders, shadows, etc.
- Use your creativity to design a user friendly nav and side bar in ex 4 and ex 5.
- Good Luck.
