Homework – series 4

By Arash Ghiaszadeh

Following Concepts

HTML : Forms, Inputs, Input Patterns

Company Registration
(admin view)

- Create a registration form for a company, this form is used by an admin not normal users (as a part of CMS).

- Feel free to have your design or choose a template and write the code.

- Be careful with all your fields, its important to have useful and necessary inputs.

- in case of necessity use patterns with your fields.

- Use English as your language.

library Registration

- Create a library registration form with an optional scenario.

- Feel free to have your design or choose a template and write the code.

- Be careful with all your fields, its important to have useful and necessary inputs.

- in case of necessity use patterns with your fields.

- Use Farsi as your language and be careful with all alignments.

Bank Registration

- Create a bank registration form based on a real scenario.

- Feel free to have your design or choose a template and write the code.

- Be careful with all your fields, its important to have useful and necessary inputs.

- in case of necessity use patterns with your fields.

- Use Farsi as your language and be careful with all alignments.

MFT Registration

- Create a registration form for MFT (Mojtame Fani Tehran) students.

- Feel free to have your design and scenario but, do your best to consider all necessary items.

- Be careful with all your fields, its important to have useful and necessary inputs.

- in case of necessity use patterns with your fields.

- Assume that the CEO has asked for a bilingual website, so we need both versions (Farsi & English).

Some Notes

- Use 'Media Screen Queries' to make your elements responsive.

- Define actions for hovers, clicks and active states, as an example you can change cursor style or background color.

- Feel free to use JS instructions in case of showing alerts and warnings.

- Having good scenarios is the main point of this homework, stay focused!

- Good Luck.
